Solar, outdoor

by Jean Marie Massaud

FOSCARINI

DESCRIPTION

Solar is a luminous hemisphere. Created out of polyethylene, the lamp is set on the ground and covered by a circular plane that screens the light and works concurrently as a resting surface. Solar is in harmony with a broad-ranging concept of living, in which the garden can become a living area. Not just a lamp but a new type of object, a contemporary hearth around which to gather and chat. The straight resting surface, in a dark wood finish with a characteristic textured effect is flush with the outer edge, to allow the rain to just slip away. Decorative on its own or arranged in a composition of multiples, Solar has a retractable base that allows you to incline it in order to change the lighting effect while remaining perfectly stable. A bright, warm and intimate centre of attraction, Solar is ideal for scenic compositions, in the garden, to create suggestive light paths.

MATERIALS

Rotational moulded polyethylene, gres and varnished metal
